Summary

Software Engineer with 1.5+ years of experience across backend development, AWS serverless architecture, production support, and automation. Built scalable applications using Node.js, TypeScript, Python, PostgreSQL, DynamoDB, and AWS services including Lambda, API Gateway, Cognito, and CloudFormation.

Education

B.Sc in Information Technology
Pillai College, Panvel

2018 – 2021

Experience

Software Engineer — Clover Infotech (Client: HDFC Bank)

Jan 2025 – Present

- Supported enterprise wealth management applications across Production and UAT environments, handling deployments, troubleshooting, incident resolution, and release activities.
- Coordinated with business, development, infrastructure, and security teams during production incidents, RCA investigations, and platform upgrades.
- Managed and supported platform components including Redis, Elasticsearch, NGINX, SSL certificates, and WAF.
- Developed Python and Shell-based deployment automation for artifact deployment, configuration migration, service management, and rollback workflows that reduced deployment time from ~50 minutes to under 10 minutes.
- Built a Python/Selenium-based SIT automation solution for 4 applications, reducing sanity validation time from ~3 hours to under 5 minutes through automated validation, health checks, and reporting.

Backend Engineer — Cloudberry Solutions

May 2024 – Jan 2025

- Built serverless backend applications using AWS Lambda, API Gateway, DynamoDB, PostgreSQL, Cognito, S3, and CloudFormation.
- Developed REST APIs for customer engagement, loyalty management, merchant onboarding, feedback processing, and business workflows.
- Implemented authentication, authorization, and event-driven workflows using Cognito, SNS, SQS, Step Functions, and EventBridge.
- Designed PostgreSQL schemas, DynamoDB data models, and CloudFormation infrastructure for scalable serverless applications.

Projects

RealEstate Flow — Multi-Tenant Real Estate CRM Platform [Live](#)

- Built a multi-tenant real estate CRM platform using Node.js, Express, DynamoDB, AWS Lambda, API Gateway, Cognito, and S3.
- Designed tenant-isolated authentication and access control using Cognito, Google OAuth, phone OTP, RBAC, and server-side authorization.
- Developed backend services for lead management, meetings, notifications, document management, and property operations.
- Developed WhatsApp-integrated AI assistant capabilities supporting QR-based device pairing, session management, CRM workflow automation, and AI-powered business data retrieval.
- Designed CloudFormation-based infrastructure and deployment workflows for scalable serverless environments.

Skills

Languages: TypeScript, JavaScript, Python, SQL, Shell Scripting **Backend:** Node.js, Express.js, REST APIs, Authentication, RBAC **Cloud:** AWS Lambda, API Gateway, DynamoDB, RDS, S3, Cognito, CloudFormation, SNS, SQS, Step Functions, EventBridge **Databases:** PostgreSQL, DynamoDB, Redis **Tools:** Git, Linux, Postman, Selenium
